invicti

Application Security Platform

Attackers live in runtime, so should your DevSecOps.

Invicti merged DAST market leaders Netsparker and Acunetix into a new scalable Application Security Platform. By combining both solutions with AI enhancements and expanded capabilities, the industry's leading DAST solutions are now a powerful, complete AppSec platform, featuring:

- Dynamic, interactive, and static security testing within a single platform
- Web app, shadow API, and LLM discovery and scanning
- Detection of more high and critical vulnerabilities with the help of AI
- All vulnerabilities in a single view, with remediation orchestration for complete risk posture management

Invicti combines its industry-leading coverage, accuracy, and speed with visibility and orchestration integrated into every step of your SDLC—at the scale you need. With DAST at the center, you're not just getting another security tool—you're getting a runtime force multiplier for your entire AppSec program.

Coverage

Discover and test all your apps, APIs, and LLMs, including shadow APIs and LLMs—across any environment, language, or codebase—to detect thousands of runtime-exploitable vulnerabilities.

Accuracy

AI-powered proof-based scanning verifies over 94% of direct-impact vulnerabilities with 99.98% accuracy, eliminating false alarms and enabling teams to fix issues without wasting time on verification.

Speed

Scan 8x faster than leading competitors' DASTs to keep pace with your application innovations and delivery deadlines.

Visibility

Get all security test results in a single platform for a complete view of your security posture. Invicti prioritizes your vulnerabilities based on severity, exploitability, and business relevance, allowing teams to focus on the most critical threats.

Orchestration

Streamline DevSecOps processes by automating remediation workflow assignment to native DevOps and security tools. Monitor security posture in real-time and deliver reports to relevant stakeholders.

AppSec with Zero Noise

Step 1	Step 2	Step 3	Step 4	Step 5	Step 6	Step 7
Discover	Predict	Scan	Prioritize	Pinpoint	Remediate	Deploy

Key benefits

Test everything: Web, APIs, & LLMs

Built-in app, APIs, LLM discovery, security testing, and vulnerability management. Invicti gives DAST-verified visibility into real runtime risk.

Security that starts before scanning

Powered by machine learning, Invicti's Predictive Risk Scoring flags your highest-risk assets before a scan even begins, so you can prioritize testing.

Integrate with the way you work

Native integrations with industry-leading tools and workflows, Invicti adapts to your DevSecOps stack, making it easy to test early, fix fast, and scale AppSec.

Coverage from dev to prod

Invicti brings together DAST, SAST, IAST, SCA, and more on a single platform for clear visibility into security risks at every stage of the SDLC.

Proof, not promises

See which noisy SAST findings are true threats with the industry's most advanced scan engine. Rely on proof-based scanning to fact-check other tools.

Compliance without guesswork

Simplify audits and reporting with pre-built templates for PCI DSS, ISO 27001, HIPAA, and others, powered by verified results that streamline remediation.

> " Invicti not only has better coverage and web vulnerability detection than other scanners, it is also very easy to use and allows us to automate most of the web security audit process.

Why Invicti

8x faster
than leading DAST competitors

40% more
AI-powered DAST finds 40% more high and critical vulnerabilities

99.98% accuracy
proof-based scanning delivers industry-leading accuracy

LLM scanning
with OWASP Top 10 for LLM reports

Shadow API
discovery with OWASP Top 10 for API reports

Risk Posture Management
brings complete visibility into application posture, enabling teams to prioritize and manage risk across the SDLC
